

April 2006

From the desk of Brandon Seitz

The past few months have entailed an aggressive approach to outlining the future of Indiana's energy plan and addressing its consumption needs. Within the near future we will unveil our Strategic Plan in which our initiatives and goals will be presented. A truly exciting period lies ahead as we explore and identify the various alternative and new technologies that exist as well as identify the assets Indiana has to offer.

Our vision is to enhance the exploration of coal technologies, biofuels and bioenergy as well as efficiency projects. Day-by-day, Indiana is seeing greater public access to alternative fuels; pilot projects such as "Biotown USA" in Reynolds, Indiana; increased numbers in the production facilities for ethanol and biodiesel and continued attempts at ways to generate economic growth so as to stimulate Indiana's economy. The ultimate goal is to place Indiana as a leader in such technologies and initiatives through our partnerships with groups such as the Indiana State Department of Agriculture, Center for Coal Technology Research, Purdue University, Indiana's Clean Cities Coalitions, Indiana Soybean Board, Indiana Coal Council and other state agencies.

This state is poised to allow these concepts to be initiated and grow exponentially. We greatly appreciate the support we have received and look forward to the future with optimism and insurmountable energy.

Sincerely,

Brandon Seitz
Manager of the Energy Division
